

**SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR
CREATING COST SYSTEM COMPONENTS IN A SUPPLY CHAIN
MANAGEMENT FRAMEWORK**

5

ABSTRACT

10 A system, method and computer program product are disclosed for creating cost system
components in a supply chain utilizing a network. A plurality of items are defined
utilizing a graphical user interface. A supplier site is selected from a set utilizing the
graphical user interface. The set of supplier sites is determined based on the definition of
the items. A distribution center is also determined utilizing the graphical user interface.
The distribution center is designated to interface with the supplier site for distribution of
the items.
